

# SAFE-T-WHIP

## Safe-T-Whip™ RD-01

The Regular Duty RD-01 is not only designed for the extreme Canadian weather and oil patch conditions, but is our most economical Safe-T-Whip for lower pressure and smaller diameter flowlines.

Light weight, and easy to haul from site-to-site, the RD-01 makes safety simple, economical and easy to prepare.

Impervious to oil and water conditions, or most chemicals, it is easy to hose off and simple to roll-up back into a tote.

*Easy to Set-up, Easy to Take-down  
Safety couldn't be more cost effective.*

IRON SIZE	
2" - 50mm	5,000PSI - 34.5 MPa
3" - 75mm	3,000PSI - 20.7 MPa
4" - 100mm	2,000PSI - 13.8 MPa

Simply loop the 4' (1.2m) RD-01 on one side of your hammer joint or swivel, then add a half-hitch to the other side. Make your connection, tighten and adjust as necessary. Changes are just as easy. Your joint, and the attached flowline pipe, is now protected from any lateral whip, should a pressurized joint failure occur.

Safe-T-Whip RD-01 restraints are made 12 strand polyester rope, for use in the extreme hot and cold Canadian oilfield environment. It is a fibre that has high strength to weight ratio with excellent abrasion resistance and a higher melting point around hot iron.
